

Wadhwani AI Company Handbook

Wadhwani Institute for Artificial Intelligence (Wadhwani AI) and Wadhwani AI Global

AI for social impact in healthcare, education and agriculture

Compiled on 20 September 2026 from the official website, LinkedIn profile information, press releases, government releases, news reports and reference sources.

Intended use: company-specific knowledge base for retrieval-augmented generation (RAG).

Figures are dated where the source dates them. Conflicting figures and unverified items are listed in Section 26.

Table of Contents

1. About This Handbook	4

27. Sources	41

1. About This Handbook

This document is a company-specific knowledge handbook about Wadhwani AI (formally, the Wadhwani Institute for Artificial Intelligence), an Indian not-for-profit AI institute that builds and deploys artificial intelligence solutions for public health, education and agriculture. It also covers the related entity Wadhwani AI Global. It was compiled on 20 September 2026 from the official website (wadhwaniai.org), the LinkedIn company profiles, press releases, government releases, news reports and reference sources listed in the Sources section at the end.

1.1 Purpose and intended use

The handbook is written to be ingested into a retrieval-augmented generation (RAG) system. Every section is self-contained and repeats the organization or solution name, so a single retrieved passage can be understood without the surrounding text. Numbers are always given together with the date or source they belong to.

1.2 How to read the numbers

Wadhwani AI publishes impact figures that change frequently and that are sometimes shown with different dates on different pages of its own website. Where two figures conflict, this handbook reports both with their dates and explains the difference in Section 26 (Data Discrepancies and Verification Notes). Figures labelled "Data: January 2026" or "Data: July 2025" reproduce the label shown on the official website.

1.3 What could not be verified

The LinkedIn page <https://www.linkedin.com/company/wadhwani-ai-global/> (Wadhwani AI Global) blocks automated access, so information about Wadhwani AI Global comes from its September 2025 launch press release and related news coverage rather than from that page itself. The Wadhwani AI (India) LinkedIn profile summary was read through search-result excerpts. Any detail marked "reported by" comes from a third party, not from Wadhwani AI.

2. Company Snapshot (Fact Sheet)

Official name: Wadhvani Institute for Artificial Intelligence, commonly called Wadhvani AI. The website describes it as "AI for Social Impact - Wadhvani AI".

Legal and organizational status: Independent, non-profit institute. The website footer states: "Wadhvani AI is a program of the AI Unit of Lords Education and Health Society (LEHS)". Reports also describe it as the LEHS AI Unit, and the Wadhvani AI Global press release calls Wadhvani AI India "a division of the Lord's Education and Health Society (LEHS)" that "will continue to run independently as an autonomous society".

Founded: 2018. Inaugurated in February 2018 by Prime Minister Narendra Modi at the University of Mumbai.

Founders: Dr. Romesh Wadhvani and Sunil Wadhvani, Indian-American technology entrepreneurs and philanthropists.

Current head: Shekar Sivasubramanian, listed on the website as "Head, Wadhvani AI".

Chief Scientist, AI/ML: Dr. Alpan Raval.

Headquarters: LinkedIn lists Guru Hargovindji Road, Building No. 11, Mumbai, Maharashtra 400093, India. Wikipedia lists Mumbai, Maharashtra. The website contact page lists the LEHS office at 70, Ring Road, Block L, Lajpat Nagar III, New Delhi 110024. Several business-data sites list Delhi as the base.

Type and industry: Nonprofit; LinkedIn industry category "Research Services".

Focus sectors: Healthcare, education and agriculture. Earlier descriptions also mention infrastructure, financial inclusion, rural development, data platforms, cyber-security and smart cities as intended areas.

Reach claimed: 190 million+ individuals reached through its technology solutions (website, data as of January 2026); 178 million+ people reached through healthcare solutions; 7.9 million students assessed; 1 million+ farmers reached.

Portfolio size: 25+ AI solutions and platforms (Wadhvani AI Global press release, September 2025; About Us timeline for 2025).

Staff size: LinkedIn: 51-200 employees (profile band). LeadIQ estimate: about 314 employees as of July 2026, across three continents. Tracxn: 87 employees as of July 2024.

LinkedIn followers: About 29,834 (as shown in a search excerpt of the Wadhvani AI LinkedIn page).

Website: <https://www.wadhwaniai.org>

General contact: contact@wadhwaniai.org

Related entity: Wadhvani AI Global, launched September 2025 in New York to serve Africa, Latin America and other low and middle-income countries.

Core values: Serve. Care. Learn. Communicate.

Guiding philosophy: "Human-in-command" responsible AI; deployment-first approach; building "AI for the bottom 95%".

3. Identity, Legal Structure and Naming

3.1 Names and how they relate

Wadhvani AI appears under several names in official material and news coverage. All of the following refer to the India-based institute unless stated otherwise:

- Wadhvani AI
- Wadhvani Institute for Artificial Intelligence (the formal institute name)
- Wadhvani AI India (used in the About Us mission statement and the Global launch release)
- LEHS AI Unit, or "Wadhvani AI (LEHS AI Unit)" (used in state government partnership announcements in 2026)
- Lords Education and Health Society (LEHS) AI Unit (the legal parent society program)
- Wadhvani AI Foundation through Lords Education and Health Society (phrase used in reporting on the Rajasthan agreement)
- Wadhvani Institute for Artificial Intelligence Foundation (a name variant listed by business-data sites)

3.2 Wadhvani AI versus Wadhvani AI Global

Wadhvani AI (India) develops and deploys solutions inside India's public systems. Wadhvani AI Global is a separate, newly launched organization headquartered in New York that applies lessons from India to the Global South through advisory services, technology development and capacity building. The launch release states that Wadhvani AI India operations continue independently as an autonomous society. See Section 17 for full details.

3.3 Wadhvani AI versus the Wadhvani Foundation

The Wadhvani Foundation (wadhvanifoundation.org) is a separate philanthropic organization also associated with the Wadhvani family. It has its own programs in skilling, entrepreneurship and technology policy, and it publishes press pages that mention Wadhvani AI Global. Some public reports on state agriculture agreements use "Wadhvani Foundation" and "Wadhvani AI" interchangeably (for example, the Andhra Pradesh agriculture MoU reported in February 2026 and the January 2024 tripartite agriculture MoU with the Ministry of Agriculture and IndiaAI). Readers should treat the legal counterparty named in each agreement as the authoritative one.

3.4 Ownership and governance facts available publicly

The institute was created through philanthropic funding by Romesh and Sunil Wadhvani. Funding descriptions differ by source: Wikipedia describes a USD 30 million philanthropic effort at founding, while the September 2025 Wadhvani AI Global press release describes a USD 25 million commitment that has supported 25+ AI platforms and solutions. Grants have come from Google.org, USAID and others (see Section 16). The website names Milton Nayak as "Chief Functionary and CFO", which is the senior administrative and finance role for the society-based structure.

4. Mission, Vision, Values and Philosophy

4.1 Mission

The official mission statement on the About Us page reads, in substance: Wadhvani AI develops and deploys artificial intelligence solutions to tackle complex social challenges and improve the lives of underserved communities globally, believing in the power of AI to create large-scale, equitable and human-centric change.

A LinkedIn description of the institute states that it aims to harness AI to find the "break points" that cause the world's deepest problems and then find innovative solutions to fix them. It says the institute specializes in AI research for public health, agriculture, education and infrastructure using machine learning, data science, cognitive reasoning and IoT, and that it works as a global AI hub with academic organizations, global nonprofits, think tanks and foundations.

A 2026 boilerplate description used in press releases calls Wadhvani AI "a cross-domain, Indian not-for-profit institute, developing and deploying AI solutions with a mission to create impact at scale and improve lives and livelihoods", working with governments and cross-sectoral partners to build trusted, responsible last-mile solutions that strengthen India's core development indicators across agriculture, health and education.

4.2 Taglines and messaging used on the website

- "Transforming Lives Through Responsible AI" (home page title)
- "We build technology that serves, scales and empowers"
- "AI for Humanity: Our Mission, Our Story" (About Us hero)
- AI for Healthcare: "We are building solutions for the last mile - we use technology to build equity"
- AI for Education: "We are building a future-ready nation by empowering those at the grassroots"
- AI for Agriculture: "We build innovative solutions that impact India's development story at the core"
- Healthcare page: "We strengthen public health systems with actionable AI"
- The organization also uses the Sanskrit-derived phrase "Sarvajana Hitay, Sarvajana Sukhay", meaning well-being and benefit for all.
- "Building AI for the bottom 95%" is used in the About Us journey section.

4.3 Core values: Serve, Care, Learn, Communicate

The Careers page defines the four values in detail:

Serve: The mission is challenging but opens opportunities to create innovative solutions and modernize existing delivery mechanisms. Staff are asked to build, hone and use their capability to serve the underprivileged with an empathetic outlook. Tagline: "Grow through competent service."

Care: Express care through attitude and action toward co-workers, customers and donors, end-users and partners; be kind and courteous. Teamwork means personal competence and empathy for others. Tagline: "Grow by caring."

Learn: Learn by observing without bias, immersing in the core material, sharing knowledge altruistically and building holistic patterns from jigsaw pieces; aspire to clarity in ambiguity; when you do not know, ask. Tagline: "Grow by learning."

Communicate: Think clearly and write and speak simply, concisely and without errors; expression should be excellent in absolute terms and is the institute's statement to the world. Tagline: "Grow by communicating."

4.4 Leadership philosophy

Shekar Sivasubramanian is described as emphasizing a deployment-first approach. The About Us page lists his working mantras as: focus on the problem, adopt systems thinking, develop mental models, apply unbiased expertise, and be perseverant. Dr. Alpan Raval champions multimodal AI and advanced speech recognition to create transformative solutions, always with a "human-in-command" philosophy.

4.4.1 Responsible AI

The Publications page states that ethics and safety are "non-negotiable". Wadhwani AI maintains a Responsible AI (RAI) playbook and a "human-in-command" philosophy intended to make every solution fair, transparent and privacy-respecting from concept to deployment. It also publishes a Responsible Data Use Policy and states that it prioritizes ethical data collection, privacy and security while using government data sources (such as the Ni-kshay TB platform) and data collected through its own solutions (such as voice samples from the Oral Reading Fluency tool).

5. History and Timeline

5.1 Founding (2018)

Wadhwani AI was launched in February 2018. Prime Minister Narendra Modi inaugurated the Wadhwani Institute for Artificial Intelligence and dedicated it to the nation at the University of Mumbai (event dated 18 February 2018 in Government of India records). The Government of Maharashtra supported the institute at launch by helping with problem identification and with testing and scaling solutions. At the start it worked on three problem areas: maternal and child health, tuberculosis care and cotton farming. The institute was set up as an independent nonprofit for AI in social good with the ambition of building AI for underserved communities in developing countries across agriculture, education, financial inclusion, healthcare and infrastructure.

5.2 Year-by-year timeline from the official About Us page

The About Us page frames the institute's first seven years as a road "from possibility to proof, building AI for the bottom 95%".

2018: Inaugurated by the Hon'ble Prime Minister of India.

2019: Early pilots with government.

2020: AI-powered COVID response.

2021: Moved from pilots to platform.

2022: 20+ solutions integrated with 7 government departments, including the Ministry of Health and the Ministry of Agriculture.

2023: 1 million milestone achieved.

2024: 10 million+ strong.

2025: 25 solutions, 9 government engagements and 20 million lives impacted.

Note: the 2025 timeline shows "20 million lives impacted", while the website's headline figure (data as of January 2026) is "190 million+ individuals reached". These measure different things (see Section 26).

5.3 Milestones from other sources

May 2019: Wadhwani AI was shortlisted for the Google AI Impact Challenge and received a USD 2 million grant from Google.org to reduce crop losses in cotton farming through integrated pest management. It was later described as the only Indian winner of the Google AI Impact Challenge.

October 2020: USAID announced funding of USD 2 million to Wadhwani AI, within a wider package to support vulnerable groups affected by COVID-19, to build modeling and AI/ML tools to forecast COVID-19 patterns, estimate resources and plan interventions.

June 2021: Sameer Garde, formerly President of Cisco India and SAARC and previously head of Dell India, was announced as CEO, joining in August 2021 and succeeding P. Anandan, the institute's earlier CEO who had left earlier in 2021. Garde outlined a two-part strategy: strengthen work as an innovator with continued emphasis on deployment and scaling, and act as a catalyst helping large social programs become AI-ready. At that time the institute worked with about 40 partner organizations across governments, international organizations, nonprofits, philanthropies and research institutions.

March 2023: Clinical Decision Support System (CDSS) integrated with eSanjeevani, India's national telemedicine platform.

21 September 2023: Kisan e-Mitra, the AI chatbot for the PM-KISAN scheme, was launched by the Union Minister of State for Agriculture and Farmers Welfare.

6 November 2023: The Ministry of Agriculture and Farmers Welfare announced Krishi 24/7, described as the first AI-powered automated agricultural news monitoring and analysis solution.

January 2024: Tripartite MoU between the National Farmers' Welfare Programme Implementation Society, IndiaAI (Digital India Corporation) and the Wadhvani Foundation to support an AI strategy for agriculture.

February 2024: Kisan e-Mitra upgraded to use a large language model.

2024: National Pest Surveillance System (NPSS) launched by the Government of India, with Wadhvani AI among the collaborators; diabetic retinopathy screening deployments began in October 2024.

September 2025: Wadhvani AI Global launched in New York.

28 January 2026: Google.org announced a Rs 85 crore (about USD 10 million) grant to Wadhvani AI for a national AI-for-Education blueprint.

February 2026: MadhuNetrAI won the "AI for ALL: Global Impact Challenge" at the India AI Impact Summit 2026; Andhra Pradesh agriculture department signed an MoU.

March 2026: Uttar Pradesh government and Wadhvani AI announced an implementation roadmap for seven AI public-health solutions.

May 2026: Rajasthan agriculture department signed a three-year MoU.

6. Founders and Leadership

6.1 Founders

Dr. Romesh Wadhvani: Founder. The website describes him as a visionary entrepreneur and philanthropist who co-founded Wadhvani AI India to ensure technology serves humanity, with a commitment to deploy AI responsibly to address inequities and build a better future. Widely reported background (not stated on the Wadhvani AI site): Indian-American technology entrepreneur and philanthropist, founder of Aspect Development and Symphony Technology Group.

Sunil Wadhvani: Founder. The website describes him as an accomplished entrepreneur and investor who co-founded Wadhvani AI India with a focus on making AI truly usable where it matters most, to serve the underserved and drive innovation in public systems. Widely reported background (not stated on the Wadhvani AI site): co-founder of Mastech, which became iGate.

Shalina Wadhvani: Named as Co-Founder of Wadhvani AI Global in the September 2025 launch release; she emphasized "scalable and sustainable impact" and said the group is "not here to create one-time pilots that fade away".

6.2 Guiding vision (India leadership named on the About Us page)

Shekar Sivasubramanian: Head, Wadhvani AI. Leads the charge to translate AI potential into tangible social impact with a deployment-first approach. Quoted in January 2026 saying that meaningful transformation requires AI solutions that work in grounded Indian contexts (multilingual, accessible, cost-effective and aligned with government priorities), and that the aim is to build a blueprint that can serve the Global South. Earlier LinkedIn posts referred to him as CEO of Wadhvani AI.

Dr. Alpan Raval: Chief Scientist, AI/ML. Spearheads applied AI research focused on mainstreaming AI responsibly; champions multimodal AI and advanced speech recognition under a "human-in-command" approach.

6.3 Senior leadership team (from the official Team page, listed as of September 2026)

- Shekar Sivasubramanian - Head, Wadhvani AI
- Alpan Raval - Chief Scientist, AI/ML
- Abhishek Kumar - Vice President, Product and Engineering
- JP Tripathi - Director, Agriculture Programs
- Milton Nayak - Chief Functionary and CFO
- Neeraj Agrawal - Chief Program Officer (addressed as Dr. in a May 2026 press release)
- Neha Vats - Associate Director, HR
- Prachi Karkhanis - Associate Director, MEL (Measurement, Evaluation and Learning)
- Rituparna Sengupta - Director, Communications and Outreach
- Arti Ahuja - Senior Advisor

6.4 Former leaders

- P. Anandan - earlier CEO, who left in early 2021 (Wikipedia lists him as ex-CEO).
- Sameer Garde - CEO from August 2021 (Wikipedia still lists him as CEO). The current website uses the title "Head, Wadhvani AI" for Shekar Sivasubramanian.

7. Organization Structure and Teams

7.1 Departments listed on the Team page

The Team page says its people "pair deep technical expertise with frontline experience, listening to communities, adapting technology, and delivering tools trusted by users", and that its multidisciplinary team of engineers, researchers and field practitioners designs, deploys and measures solutions that strengthen public systems. The team is organized into these groups:

- Administration
- Advisory and Strategic Initiatives (includes technology policy associates, an AI strategy specialist and program associates)
- Capacity Building (instructional designers and capacity-building managers)
- Communications (program communications, design, motion graphics and content)
- Deployment (program managers and officers working with state and district health, education and agriculture systems, including a Program Manager for the MP AI Unit)
- Engineering (software development, QA, cloud and infrastructure, IT support, data analysts)
- Finance
- Grant Management
- Human Resources (talent acquisition, HR operations, HR automation)
- Measurement and Evaluation (MEL associates and officers, a senior MERLI specialist, data analysts)
- Machine Learning (ML scientists, associate ML scientists, ML engineers and ML analysts across speech, vision, language and clinical AI)
- Partnerships (including a CSR fundraising role)
- Products (product managers, group product managers, senior product analysts and data specialists)
- Programs (program managers, pedagogists, a language expert, dermatologists, a public-health medical expert, an agriculture (climate) expert and MEL specialists)
- Project Operations
- Technical Documentation
- Office of Leadership
- User Research (design researchers and UX/UI designers)

7.2 Notable senior roles by function

- Engineering: Vishal Gauba, Associate Director, Engineering; Abhishek Kumar, Vice President, Product and Engineering; Himesh Yadav, Cloud, Infrastructure and Security Manager; Aakash Patel, QA Manager.
- Machine Learning: Minesh Mathew, Srinivas Rana and Sudarshan Sekhar are Senior ML Scientists; the group also includes ML Scientists and Associate ML Scientists (levels I and II).
- Products: Mohammad Salman and Shreya Thakur, Group Product Managers; Deepashree Mahajan, Manjari Sheel, Tonmoy Dutta, Trisha Singh and Vaibhav Yadav, Senior Product Managers; Rajarshi Singh, Associate Director, Programs and Policy (Education).
- Programs and Deployment: Rajnish Gourh, Associate Director, Programs; Srijeet Mukherjee, Lead Pedagogist; Pragya Dube, Program Manager, MP AI Unit.
- Finance and Grants: Deepak Sharma, Senior Manager, Finance and Administration; Avinash Agarwal, Senior Manager, Finance; Vineet Garg, Senior Grants Manager.

- Partnerships: Ria Basu, Senior Manager, Partnerships; Sudhanshu Jain, Senior Manager, CSR Fundraising; Manika Rana, Manager, Partnerships.
- Human Resources: Iffat Ara, Lead, HR Operations; Pramod Prabhakar, Lead, Talent Acquisition and HR Automation.
- Communications: Malika Chandra, Lead, Program Communications.
- Measurement and Evaluation: Vaibhav Patwardhan, Senior MERLI Specialist.
- User Research: Shivi Kapil, Lead Design Researcher; Vishad Tomar, Senior UI/UX Designer.

This list is a selection; the full roster is on <https://www.wadhvaniai.org/team/>.

7.3 Team size estimates

No official headcount is published. LinkedIn shows the 51-200 employee band, LeadIQ estimated about 314 employees in July 2026, and Tracxn recorded 87 in July 2024. The Team page names substantially more people than the LinkedIn band, so third-party counts are best treated as rough estimates.

8. Locations and Contact Information

8.1 Addresses

Delhi (LEHS office on website contact page): Lords Education and Health Society (LEHS), 70 Ring Road, Block L, Lajpat Nagar III, Lajpat Nagar, New Delhi 110024, India.

Mumbai (LinkedIn headquarters): Guru Hargovindji Road, Building No. 11, Mumbai, Maharashtra 400093, India.

Other locations: Job postings show work locations or remote roles in New Delhi, Noida, Vijayawada, Dehradun and Barpeta (Assam). The Deployment team works from state and district locations across India.

Wadhvani AI Global: New York, United States (launch dateline).

8.2 Email contacts published on the website

- General communication: contact@wadhwaniai.org
- Partnership inquiries: partnerships@wadhwaniai.org
- Job applications: careers@wadhwaniai.org
- Media queries: communications@wadhwaniai.org
- Wadhvani AI Global media contact (from the launch release): Gitika Sharan, gitika@wadhwaniaiglobal.com

8.3 Social and web channels

- Website: <https://www.wadhwaniai.org>
- LinkedIn (Wadhvani AI): <https://www.linkedin.com/company/wadhvani-ai-2018/>
- LinkedIn (Wadhvani AI Global): <https://www.linkedin.com/company/wadhvani-ai-global>
- X (Twitter): <https://x.com/wadhwaniai>
- Facebook: <https://www.facebook.com/WadhvaniAI/>
- Instagram: <https://instagram.com/wadhwaniai>
- YouTube: channel UC-76iC2WCBX7Z-ESmj8ECBw
- Wadhvani AI Global website: www.wadhwaniaiglobal.com; Instagram: instagram.com/wadhwaniaiglobal
- Education microsite: <https://aiforeducationinnovation.com>
- Spoken English (SEAP) app site: <https://spokenenglish.wadhwaniai.org>
- Careers portal: Zoho Recruit page at wadhwaniai.zohorecruit.in

8.4 Website structure

Main menu: Home; About (About Us, Our Team); Impact (Healthcare, Education, Agriculture, Stories of Change); Publications; News and Events (Blogs, News, Events); Careers; Contact Us. Each solution has its own page under </impact/healthcare-solutions/>, </impact/education-solutions/> or </impact/agriculture-solutions/>.

9. Impact at a Glance

9.1 Headline numbers from the official website

Individuals reached through tech solutions: 190 million+ (data: January 2026).

People reached through healthcare solutions: 178 million+ (data: January 2026).

Students assessed (AI for Education): 7.9 million (data: January 2026).

Farmers reached (AI for Agriculture): 1 million+ (data: January 2026 on the home page; July 2025 on the agriculture page).

Oral Reading Fluency assessments: 15 million+ (data: January 2026, home page and education page); the solution page later shows 34 million assessments (see Section 13.2).

Teleconsultations served with CDSS: 234 million+.

Kisan e-Mitra grievances resolved: 3 million+ (home page "Grievances resolved through digital advisory and support").

Farmer chatbot messages exchanged: 498 thousand+ (home page).

Villages prioritized for TB screening through Vulnerability Mapping: 35 thousand+.

Government engagements and solutions: 25 solutions and 9 government engagements (2025 timeline); 7 AI solutions being deployed in Uttar Pradesh public health (March 2026).

9.2 Featured solutions on the home page

- Shishu Maapan: 5 states, 11,927+ people impacted; "Ensuring every child gets a healthy start".
- Cough Against TB: 16 states, 122,476+ patients screened; "Using the sound of a cough to fight a global epidemic".
- Oral Reading Fluency: 2 states, 15 million+ assessments; "Building a nation of strong readers".

9.3 Reach philosophy

Wadhvani AI states that it works across every State and Union Territory through its solutions, and that it partners with government agencies, NGOs, academic institutions and private sector leaders. Its LinkedIn and press descriptions emphasize scale through integration into government platforms (for example eSanjeevani, Ni-kshay, PM-KISAN and POSHAN Tracker) rather than stand-alone apps.

10. Approach: How Wadhwani AI Works

10.1 Deployment-first, government-embedded model

Wadhwani AI builds solutions to fit inside existing government workflows and technology platforms. In a public statement about its cotton pest work, an institute representative said the solution was built to fit the existing government framework, workflows and technology platform. Its 2025 and 2026 announcements repeat the model: partner with governments, multilaterals and local organizations to embed AI directly in critical public systems instead of running one-time pilots.

10.2 Stages of an engagement

Based on its published descriptions, engagements move through: problem identification with a government partner; user research and design with frontline workers; model development and validation (often with clinical or scientific partners such as AIIMS, ICMR and ICAR institutes); pilots; integration into a national or state platform; capacity building and training; and measurement, evaluation and learning (MEL) to track adoption and outcomes.

10.3 The three service pillars of Wadhwani AI Global

Advisory services (national AI strategy aligned with development priorities), technology development (context-specific, adaptable solutions rather than generic imports) and capacity building (strengthening local institutions and talent). Wadhwani AI India's teams (Advisory and Strategic Initiatives, Products, Engineering, ML, Capacity Building, MEL) provide comparable capabilities.

10.4 Data for Good

Wadhwani AI states that data drives social good, always under ethical collection, privacy and security rules from its Responsible Data Use Policy. It uses government data (such as Ni-kshay records, geospatial data and health surveys) and data collected through its own tools.

11. Technical Capability Areas

The Publications page lists the research focus areas below. Each entry names example solutions.

Responsible AI (RAI): RAI playbook and "human-in-command" philosophy for fairness, transparency and privacy.

Generative AI: Used in Krishi Saathi and planned for the Oral Reading Fluency tool, to personalize content, automate tasks and make information accessible. Krishi Saathi has been reported to use GPT-4o-mini to generate weather summaries.

Automatic Speech Recognition (ASR): ASR for diverse Indic languages, key to Oral Reading Fluency, SEAP and Agri AI Collect.

Computer Vision: Analyzing a newborn's health from video (Shishu Maapan), detecting crop pests, and interpreting medical images (Line Probe Assay, chest X-rays, diabetic retinopathy).

Multimodal AI: Correlating audio, images and text, such as linking cough sounds with X-ray data for TB.

Natural Language Processing (NLP): Understanding farmer queries in many languages (Kisan e-Mitra) and scanning news sources for alerts (Media Disease Surveillance and Krishi 24/7).

Edge and Low-Resource Solutions: AI that runs on basic smartphones and in low-connectivity settings (offline cough screening, offline newborn measurement).

Risk Stratification: Models that identify vulnerable individuals early, such as PATO for TB outcomes and PROS for missed antenatal visits.

The "AI Readiness" workshops that Wadhvani AI runs for partners (for example one hosted at WISH Foundation India, presented by Mihir Kulkarni and Sai Nikhilesh Reddy, per a LinkedIn post) are part of its knowledge-building initiative.

12. Healthcare

12.1 Overview

Website tagline: "We strengthen public health systems with actionable AI". Healthcare solutions reached 178 million+ people (data: January 2026). The healthcare work is grouped into three areas: Maternal, Newborn and Child Health; Tuberculosis; and E-health (AI to strengthen public health). A promotional video is titled "AI for Public Health - Wadhvani AI".

Headline area figures on the Healthcare page

- Maternal, Newborn and Child Health: 635+ ASHAs trained; 5,588+ babies registered.
- Tuberculosis: 35 thousand+ villages prioritized through Vulnerability Mapping; 267,476+ patients enrolled through PATO.
- E-health: 234 million+ teleconsultations served; 650+ healthcare workers trained under HealthVaani.

12.2 Maternal, Newborn and Child Health (MNCH)

Solution: Shishu Maapan

Domain: Healthcare, newborn and child health.

What it does: A smartphone app that lets frontline health workers assess newborn health quickly. By analyzing a short video of a newborn, it estimates anthropometric measurements (weight, length, head circumference and chest circumference) in seconds to identify at-risk infants immediately.

Challenge addressed: Early detection of malnutrition or growth problems in newborns is vital, but traditional measurement in community settings is cumbersome and error-prone.

Technology: Computer-vision AI model that analyzes video; designed to work offline on basic smartphones; integrated with public health platforms such as ANMOL.

Users: ASHAs and other frontline workers.

Where deployed: Dadra and Nagar Haveli and Daman and Diu, Arunachal Pradesh and Assam (solution page); the home page shows 5 states.

Impact figures (data: July 2025): 11 thousand+ people impacted; 3,600+ newborn data captured accurately; 635+ ASHA workers trained; 5,588+ newborns registered; 471 active ASHA users; 10,732 HBNC (home-based newborn care) registrations; 21,582 HBNC visits; about 3% of babies flagged as high risk.

Partners: State governments of Dadra and Nagar Haveli and Daman and Diu, Assam and Arunachal Pradesh.

Blog: "Simplifying Newborn Anthropometry - One Smartphone Video at a Time".

Solution: Pregnancy Risk and Outcome Stratification (PROS)

Domain: Healthcare, maternal health.

What it does: Predicts which pregnant women are likely to miss antenatal care (ANC) visits so that Auxiliary Nurse Midwives (ANMs) can prioritize outreach, strengthening continuity of maternal services and preventing avoidable complications. Acts as an early-warning system.

Technology: An AI model learns from data collected during ANC visits, combining medical history with new information to flag potential no-shows.

Status: Pilot phase.

Impact figures: 650+ frontline workers trained; 6 states.

12.3 Tuberculosis (TB)

Context: India accounts for about 26 to 27 percent of the global TB burden (Cough Against TB page). Wadhwani AI states that it is deploying AI tools across every step of TB care, from screening and diagnosis to ensuring patients complete treatment. Its September 2025 release describes "a cascade of AI solutions" that screens for TB using cough sound data and patient history.

Solution: Cough Against TB (CAT)

Domain: Healthcare, TB screening.

What it does: An app that analyzes the sound of a person's cough together with self-reported symptoms to screen quickly for presumptive pulmonary TB, including asymptomatic cases, enabling faster screening and timely referral in hard-to-reach settings.

Technology: Offline AI on smartphones; developed with India's Central TB Division.

Where deployed: Active in 16 states per the solution page text (listing Mumbai, Delhi, Telangana, Mizoram, Nagaland, Punjab, Kashmir, Haryana, Chandigarh, Uttarakhand, Madhya Pradesh, Rajasthan, Arunachal Pradesh, Assam and Meghalaya); the impact panel shows 17 states.

Impact figures: Header (data: July 2025): 122,000+ patients screened. Impact panel: 289,777 patients screened; 37,802 presumptives identified; 17 states. Home page: 16 states and 122,476+ patients screened.

Government adoption: One of seven solutions in the 2026 Uttar Pradesh public-health roadmap.

Blog: "Community Health Officers Lead the Charge for Statewide AI-based TB Screening".

Solution: Prediction of Adverse TB Outcomes (PATO)

Domain: Healthcare, TB treatment support.

What it does: Uses patient data to predict, at the start of treatment, who is at high risk of poor outcomes such as defaulting or death, so providers can focus support on those who need it most and reduce loss to follow-up.

Technology: Risk stratification model that flags high-risk individuals for prioritized follow-up; being integrated into national TB platforms (Differentiated TB Care module and Ni-kshay).

Impact figures: Header (July 2025): 267,000+ patients enrolled. Text: 147,000+ TB patients enrolled across 15 states and union territories; nearly 35,000 high-risk individuals identified; over 22,000 targeted interventions; patients who received follow-up showed a 20% reduction in adverse outcomes. Panel: 3,546,440 patients enrolled; 1,351,688 high-risk patients identified; 36 states and UTs (28 states plus 8 UTs). Integration expected to reach about 2.5 million patients annually.

Blog: "How AI is helping health workers bridge the follow-up gap in India's fight against TB".

Solution: Line Probe Assay (LPA) Automation

Domain: Healthcare, drug-resistant TB diagnosis.

What it does: Automates the interpretation of Line Probe Assay test strips used to diagnose drug-resistant TB (DR-TB), reducing manual errors and speeding up diagnosis.

Technology: AI model that interprets the band patterns on LPA strips.

Validation: Validated by ICMR with accuracy of 97.3% for first-line LPA and 100% for second-line LPA.

Deployment: Nationwide across 97 CDST (culture and drug susceptibility testing) labs in 28 states and 8 union territories; through Ni-kshay integration, set to support about 400,000 tests annually.

Solution: Vulnerability Mapping (VMTB)**Domain:** Healthcare, TB targeting.**What it does:** Predicts and visualizes TB-vulnerable geographies so health authorities can target screening and resources. Addresses the gap between estimated and reported TB cases.**Technology:** Model analyzes Ni-kshay records, geospatial data and health surveys to generate vulnerability scores from village to sub-district level.**Deployment:** 138 districts across Uttar Pradesh, Assam, Haryana, Madhya Pradesh and Mizoram (5 states).**Impact:** 35,000+ high-risk villages identified. Part of the Uttar Pradesh seven-solution roadmap. Wadhwani AI also introduced this as an AI-driven mapping tool that identifies communities most at risk of undiagnosed TB.**Solution: Chest X-Ray AI (TB Scan)****Domain:** Healthcare, TB and lung disease diagnosis.**What it does:** AI that interprets chest X-rays instantly to detect pulmonary abnormalities, automating initial screening and supporting teleradiology in facilities with few radiologists.**Deployment:** TB Scan in Madhya Pradesh across 11 facilities.**Impact figures:** 114,000+ X-rays processed; 5,600+ potential TB cases flagged.**Partners:** AIIMS Delhi and the Government of Madhya Pradesh.**12.4 E-Health (AI to strengthen public health)****Solution: Clinical Decision Support System (CDSS)****Domain:** Healthcare, telemedicine.**What it does:** Structures patient information collected on eSanjeevani, India's national telemedicine platform, and assists doctors by suggesting potential diagnoses and treatment approaches in real time. It addresses incomplete or unstructured data in telemedicine.**Technology:** An AI model analyzes structured data from Patient Assistance Forms.**Deployment:** Integrated with eSanjeevani since March 2023; covers 31 differential diagnoses (conditions) in 28 states; the healthcare page says it supports 350,000 daily consultations, while the September 2025 launch release says it empowers 160,000 health workers to conduct over 250,000 consultations daily.**Impact:** 234 million+ teleconsultations served.**Solution: Diabetic Retinopathy Detection and MadhuNetrAI****Domain:** Healthcare, eye health.**What it does:** Analyzes retinal images captured by a simple fundus camera to screen instantly for diabetic retinopathy (DR) severity and refer high-risk patients to ophthalmologists. DR is a leading cause of preventable blindness.**Clinical validation:** An AIIMS evaluation confirmed 96% sensitivity and 97% specificity. The solution was developed with AIIMS Delhi and under the aegis of the Ministry of Health and Family Welfare.**Deployment (solution page):** Screening since October 2024; 13,862 individuals screened; 5,037 identified as referrals; 13 states; 47 health facilities (page text also says 9 states). An older healthcare-page blurb says it was deployed across 20 AIIMS centers, screening 3,000+ patients.**MadhuNetrAI (branded name):** As of February 2026, MadhuNetrAI had processed roughly 20,000 retinal images and supported screening of over 10,000 patients across 40 facilities in 21 districts of 11 states,

identifying more than 3,000 referable cases and over 1,000 cases of vision-threatening DR. It supports optometrists, nurses and community health officers. Deployment with National Health Mission (NHM) Rajasthan, Meghalaya, Assam and Odisha was reported.

Award: Winner of the "AI for ALL: Global Impact Challenge" at the India AI Impact Summit 2026 (more than 4,600 applications from over 60 countries).

Context: India has more than 101 million people living with diabetes (figure in the award announcement).

Blog: "Beyond the Blind Spots: Using AI to Prevent Blindness in Diabetics".

Solution: HealthVaani

Domain: Healthcare, frontline worker support.

What it does: An AI conversational assistant on mobile that gives ASHAs, ANMs, Anganwadi workers and other frontline health workers instant, role-specific, validated guidance in Hindi, English and Hinglish.

Deployment: Piloted with Anganwadi workers in Uttar Pradesh, Haryana, Meghalaya, Madhya Pradesh, Rajasthan and Arunachal Pradesh (6 states); the healthcare page says it is scaling toward 300+ districts.

Impact figures: 17,846 total interactions; 14,671 queries; 801 users; 650+ healthcare workers trained under HealthVaani (healthcare page).

Partners: Partner logos on the page include UNICEF and Gavi.

Solution: Media Disease Surveillance (MDS)

Domain: Healthcare, outbreak early warning.

What it does: Automatically scans more than 35,000 media sources in 12 Indic languages and English using NLP to identify potential health events and send real-time alerts to health authorities.

Government role: Now a core part of India's Integrated Disease Surveillance Programme (IDSP); the National Centre for Disease Control uses a comparable automated surveillance tool. In 2023 MDS generated 98% of all media alerts from the central surveillance unit.

Impact figures: Since 2022, flagged over 110,000 unique events leading to 437 confirmed outbreaks. Panel: 1,106 potential outbreaks detected; 182,521 unique events extracted; 36 states and UTs.

12.5 Uttar Pradesh public health partnership (March 2026)

The Government of Uttar Pradesh and Wadhvani AI (LEHS AI Unit) announced an implementation roadmap to deploy a suite of AI solutions across state public-health programs, with room to add more. The collaboration sits within the UP AI Mission, a three-year state initiative, and covers TB care and management, telemedicine, maternal and child health, eye health screening and frontline health worker support. The initial phase focuses on seven AI solutions, including Cough Against TB and Vulnerability Mapping for TB. Wadhvani AI acts as technical partner. Amit Kumar Ghosh, IAS, Additional Chief Secretary for Medical Health, Family Welfare and Medical Education in Uttar Pradesh, said the state looks forward to adopting the tools across its health programs and progressively expanding their use.

13. Education

13.1 Overview

Website tagline: "We are developing AI solutions to enhance foundational literacy". Wadhvani AI reports 7.9 million students assessed (data: January 2026). The Education page groups its work under "Strengthening Foundational Learning" (2 states, 15 million+ assessments on that page) and "Enhancing Spoken English and Higher Education" in collaboration with India's Ministry of Education, bringing AI to platforms such as SWAYAM. An "AI for Education Innovation" microsite is at aiforeducationinnovation.com.

13.2 Solution: Oral Reading Fluency (ORF)

Domain: Education, foundational literacy.

What it does: An AI tool that listens to students read aloud and turns speech into teacher-ready fluency insights: accuracy, reading speed, missed words and error flags. Teachers use this to give targeted support, accelerate reading gains and personalize classroom practice. A new comprehension feature is being added.

Challenge addressed: Assessing oral reading fluency accurately and providing personalized support is hard for teachers with large classes.

Technology: Automatic Speech Recognition (ASR) models fine-tuned for Indic languages and for children's voices. Generative AI is planned for the tool.

Users: Teachers and students in Grades 2 to 8 in government schools (Gujarat and Rajasthan); planned scale-up covers Grades 1 to 8.

Impact figures, home and education pages (data: January 2026): 15 million+ assessments; 2 states.

Impact figures, solution page (undated panel, page last modified August 2026): 34 million assessments; 378,901 teachers; 9.2 million unique students (11.9 million assessed); 100,255 schools covered.

Earlier figures: September 2025 launch release: more than 6 million children and 11 million assessments in Gujarat and Rajasthan. January 2026 education announcement: deployments reaching nearly 7 million students.

Scale-up plan (January 2026): AI-powered ORF assessment and guided remediation for Grades 1 to 8 reaching 25 million children across government schools, supporting 400,000 teachers, scaling nationally across 10 Indian languages.

Blog: "Vaachan Samiksha: Leveraging AI to Bridge the Literacy Divide" (blog on the reading-assessment work).

13.3 Solution: Spoken English Assessment and Practice (SEAP)

Domain: Education and employability.

What it does: Uses ASR to evaluate learners' spoken English and give instant, structured feedback on fluency, pronunciation and accuracy (and in the January 2026 plan, grammar and tone), so students can practice confidently and instructors can target improvement. Learners record passages and receive real-time feedback.

Challenge addressed: Many students from regional-language backgrounds have few opportunities to practice and get feedback on spoken English, which is vital for future success.

Technology: Speech recognition trained on Indian accents; simulates real workplace scenarios.

Planned reach: 500,000 learners and young adults in ITIs, polytechnics and colleges in Tier 2 and Tier 3 cities, aligned with state skilling missions.

Access: <https://spokenenglish.wadhwaniai.org>

13.4 Solution: Learning Enhancement and Assessments for Revamping NMEICT (LEARN)

Domain: Higher education, online learning.

What it does: Personalizes the SWAYAM online learning experience with AI: recommends courses, breaks long lecture videos into concise chapters and generates automated assessments so learners can discover, engage and progress efficiently.

Partner: Ministry of Education and the National Mission on Education through ICT (NMEICT), which operates SWAYAM.

13.5 Early Childhood Care and Education (ECCE) and AI skills

Under the Google.org-backed programme (Section 13.6), Wadhvani AI plans AI tools for ECCE reaching 50 million children under six through the national POSHAN Tracker platform. This includes mobile-based AI tools, a national digital content library of 1,000+ resources and large-scale training support for 1.4 million Anganwadi workers. It also plans AI skills development modules (applied AI, generative AI and workplace tools) for 500,000 students in colleges and ITIs in Tier 2 and Tier 3 cities.

13.6 National AI-for-Education Blueprint and Google.org grant (28 January 2026)

On 28 January 2026 Google.org announced a Rs 85 crore (about USD 10 million) grant to Wadhvani AI for the "AI for Education Innovation" initiative. Over three years, Wadhvani AI will build India's first comprehensive AI-for-Education blueprint through an "AI for Education Collaborative", integrating proven, responsible AI solutions into government-owned digital platforms: SWAYAM, POSHAN Tracker, state learning management systems and national skilling portals.

Targets by December 2027: 75 million students, 1.8 million educators and 1 million early career professionals across early childhood education, K-12 schooling and higher education.

Components: ECCE tools via POSHAN Tracker (50 million children); ORF at national scale (25 million children, 400,000 teachers, 10 languages); SEAP (500,000 learners); AI skills (500,000 learners).

Stated goals: Improve learning outcomes, personalize education pathways, reduce administrative burden on educators and prepare youth for the future of work; create a blueprint that can serve the Global South.

Reported context: Google India said the initiative had already reached 10 million students and educators.

13.7 Education research: Bridgespan report

In partnership with The Bridgespan Group and with support from Google.org, Wadhvani AI published a report identifying seven bold bets to transform learning outcomes for 350 million students through responsible AI in foundational education. A July 2026 news report also described a Wadhvani AI report that India is ready to scale AI across public education by integrating tools into existing public delivery systems.

14. Agriculture

14.1 Overview

Website tagline: "We empower Indian farmers with intelligent solutions". Farmers reached: 1 million+. The agriculture work has three groups: Digitizing Agriculture (AI for efficient farm management), Pest Management (protecting crops, securing livelihoods) and AI-Powered Agricultural Advisories (actionable agri intelligence). JP Tripathi, Director of Agriculture Programs, said in December 2024 that Wadhvani AI was working with the government on seven agri-tech solutions.

Headline figures on the Agriculture page

- Efficient farm management: 6 states; 36,000+ farmers onboarded.
- Advisories: 3 million+ grievances solved through Kisan e-Mitra; 279 thousand+ queries resolved through Krishi Saathi.

14.2 Digitizing Agriculture

Solution: Agri AI Collect

What it does: Voice-first data capture that turns farmers' spoken records into structured farm data, making planning and advisory easier and enabling digital records of field activities.

Technology: Speech recognition for Indic languages.

Solution: Krishi 24/7

What it does: An AI-powered monitoring tool that scans regional-language agriculture news, translates it into English, and extracts alerts on pests, weather and markets. It pulls key fields (headline, crop name, event type, date, location, severity, summary and source link) and delivers them through an interactive dashboard to policymakers and extension teams.

Government role: Developed with the Ministry of Agriculture and Farmers Welfare; announced on 6 November 2023 as the first AI-powered automated agricultural news monitoring and analysis solution.

Solution: Soybean Grain Analyzer

What it does: Computer-vision, smartphone-based assessment of soybean grain quality, grading and protein levels, so farmers can negotiate fair prices with transparent quality measures before going to market.

14.3 Pest Management

Context from the agriculture site: pest outbreaks can devastate crops, causing average yield losses of about 23 percent, and farmers often lack timely expert advice.

Solution: Crop Ace (cotton AI pest management)

What it does: AI tool that diagnoses pests and diseases from photos and gives multilingual advisories for cotton, maize, chilli and rice. The original CottonAce work used smartphone images of pheromone traps and a deep-learning model to detect and count pink bollworm moths, and it was field-tested in Karnataka and Maharashtra.

History: Supported by a USD 2 million Google.org grant in 2019. Tested with partners such as IDH, the Welspun Foundation and the Better Cotton Initiative among about 18,000 farmers in Telangana, Maharashtra and Gujarat, to be shared with farmers by state governments. The International Cotton

Advisory Council (as named in an IndiaAI report) was reported as a partner to scale it globally.

Solution: National Pest Surveillance System (NPSS)

What it does: An AI-based national platform where farmers photograph infested crops and experts return identification and advice. Wadhwani AI's models are integrated into ICAR-NCIPM's system and use computer vision to identify and quantify major crop pests across dozens of crops.

Government context: A collaborative initiative of the Directorate of Plant Protection, Quarantine and Storage and ICAR-NCIPM, with other collaborators reported including ICAR-IASRI, PEAT Inc and Wadhwani AI. A 2026 scientific review states that the AI-based pest identification module covers major pests and diseases of 61 crops, alongside surveillance and advisory modules. The system was launched in August 2024 for key pests of rice, cotton, maize, mango and chilli.

14.4 AI-Powered Agricultural Advisories

Solution: Kisan e-Mitra

What it does: An AI chatbot that answers farmers' questions and resolves grievances related to the PM-KISAN income-support scheme, instantly and in multiple languages, reducing administrative burden on officials.

Launch: 21 September 2023, by the Union Minister of State for Agriculture and Farmers Welfare. Described as the first AI chatbot integrated with a major flagship scheme of the Government of India.

Technology: NLP to interpret farmer intent; upgraded to use a large language model in February 2024; integrated with Bhashini (national language translation mission) for 11 Indic languages, with text and audio input and output.

Access: Available nationwide through the PM-KISAN portal and app.

Impact figures: Website: more than 3 million grievances resolved for more than 290,000 farmers since the February 2024 upgrade. A third-party AI Hub entry (2026) reports more than 5 million grievances resolved, 290,000+ unique farmers served and 400,000+ farmers enrolled. Earlier report: more than 2.1 million (21 lakh) farmers accessed the chatbot within two months of launch.

Expansion: The Ministry of Agriculture and Farmers Welfare planned to integrate the chatbot with Pradhan Mantri Fasal Bima Yojana, Kisan Credit Card and Soil Health Card.

Solution: Krishi Saathi

What it does: An AI chatbot that equips Kisan Call Centre (KCC) farm tele-advisors with instant weather updates from the India Meteorological Department, expanding to plant protection, market prices and crop insurance, so they can answer farmers faster.

Technology: A large language model (reported as GPT-4o-mini) processes weather data and generates concise, shareable summaries in 11 Indic languages.

Deployment: Reported in December 2024 as used in 6 of the 17 Kisan Call Centres run by the Agriculture Ministry.

Impact figures: 279 thousand+ queries resolved.

14.5 Agriculture state agreements

Andhra Pradesh (reported 10 February 2026): The Andhra Pradesh agriculture department signed an MoU at the Secretariat in Amaravati, in the presence of the special chief secretary for agriculture and cooperation, with Wadhwani Foundation/Wadhwani AI (JP Tripathi represented the institute). AI tools will provide real-time crop assessment, early warning for pests and diseases, and data-driven advisory services.

Rajasthan (May 2026): A non-financial MoU between the Rajasthan agriculture department and Wadhwani AI (through Lords Education and Health Society), signed at Pant Krishi Bhawan in Jaipur. Wadhwani AI serves as technical partner, free of cost, for three years. Planned tools include a multilingual chatbot (reported as Agrivani), computer-vision pest and disease detection, the smartphone Soybean Grain Analyzer, and Agri AI Collect with news monitoring. Rajasthan has issued digital Farmer IDs to about 9.5 million farmers under Agri-Stack. Dr. Neeraj Agrawal, Chief Program Officer, said the solutions span advisory, pest intelligence, digitized farm records and technology-enabled quality assessment.

National (January 2024): Tripartite MoU among the National Farmers' Welfare Programme Implementation Society, IndiaAI (Digital India Corporation) and the Wadhwani Foundation, for support in formulating and executing an AI strategy for agriculture, including advisories, crop monitoring, yield prediction, pest control and resource optimization.

15. Government Partnerships and State Engagements

15.1 National ministries and agencies

- Ministry of Health and Family Welfare: eSanjeevani (CDSS), Central TB Division (Cough Against TB, PATO, LPA via Ni-kshay), National Centre for Disease Control and IDSP (MDS), AIIMS and NHM programs (MadhuNetrAI).
- Ministry of Agriculture and Farmers Welfare: PM-KISAN (Kisan e-Mitra), Kisan Call Centres (Krishi Saathi), Krishi 24/7, NPSS.
- Ministry of Education and NMEICT: SWAYAM (LEARN, SEAP). Also Ministry of Women and Child Development platforms such as POSHAN Tracker in the education blueprint.
- ICMR (validation of LPA), ICAR-NCIPM (NPSS), IndiaAI and Digital India Corporation (agriculture AI strategy MoU), Bhashini (language translation).

15.2 State and union territory engagements

- Uttar Pradesh: seven AI public-health solutions under the UP AI Mission (March 2026).
- Rajasthan: agriculture MoU (May 2026); ORF deployment in schools; NHM Rajasthan uses MadhuNetrAI.
- Andhra Pradesh: agriculture MoU (February 2026).
- Gujarat: ORF (Vaachan Samiksha) in government schools; state government listed among supporters.
- Maharashtra: supported the institute at launch in 2018; a Navbharat report of 17 March 2026 covers AI-based monitoring of the Mahatma Phule health scheme.
- Madhya Pradesh: TB Scan chest X-ray (11 facilities), Vulnerability Mapping, HealthVaani pilots and a dedicated MP AI Unit program role.
- Assam, Meghalaya, Odisha: NHM deployments of MadhuNetrAI; Assam and Arunachal Pradesh: Shishu Maapan.
- Dadra and Nagar Haveli and Daman and Diu, Haryana, Mizoram, Nagaland, Punjab, Kashmir, Chandigarh, Uttarakhand, Telangana, Delhi, Mumbai, Manipur, Tripura and Goa: appear in TB solution deployment lists.

15.3 Government engagement claims

The About Us timeline says the institute had 9 government engagements and 25 solutions in 2025, and that 20+ solutions were integrated with 7 government departments by 2022.

16. Partners, Supporters and Funding

16.1 Supporters shown on the website ("Our Valued Supporters")

The website says collaboration is at the heart of its impact and that it works with government agencies, NGOs, academic institutions and private sector leaders. Logos shown include: the Ministry of Health and Family Welfare, Government of Gujarat, All India Institute of Medical Sciences (AIIMS), Google, UNICEF, an organization labelled "GF", Salesforce, Waymo, Genpact, LV Prasad Eye Institute (LVPEI), Digital Harbor, AVPN, Neuromatch, Purflux Group, Jhpiego and Resolve to Save Lives. Partner-logo images on solution pages (identified from file names) include Gavi, PATH and Meta, along with state governments.

16.2 Known funding events

2018: Philanthropic founding by Romesh and Sunil Wadhvani (USD 25 million commitment per the 2025 release; USD 30 million per Wikipedia).

May 2019: Google.org USD 2 million grant (Google AI Impact Challenge) for cotton integrated pest management.

October 2020: USAID USD 2 million for COVID-19 modeling and forecasting tools.

25 September 2024: A grant (prize money) round recorded by Tracxn.

28 January 2026: Google.org grant of Rs 85 crore (about USD 10 million) for the AI for Education Innovation programme.

Third-party estimates: Crunchbase-style sources report roughly USD 16 million total raised (CB Insights) and USD 500 thousand across four rounds (LeadIQ). These conflict and are not confirmed by Wadhvani AI.

Investors listed by CB Insights: Google.org, Llama Impact Grants and Google Impact Challenge.

16.3 Fundraising and CSR

The Partnerships team includes a Senior Manager for CSR Fundraising, a Senior Grants Manager and a Grants Officer. The Careers page listed a Fundraising Manager opening in New Delhi. Partnership inquiries are handled at partnerships@wadhvaniai.org, and the site invites organizations to "Partner With Us" through the Contact page.

17. Wadhvani AI Global

17.1 What it is

Wadhvani AI Global announced its launch on 18 to 19 September 2025 from New York (Business Wire dateline 19 September 2025). It is described as "an impact-first organization dedicated to advancing AI for social good across the Global South", targeting Africa, Latin America and other low and middle-income countries. It partners with governments, multilaterals and local organizations to embed AI directly into critical public systems in healthcare, education and agriculture.

17.2 Leadership

- Nakul Jain: Chief Executive Officer and Managing Director, with 14 years of experience in AI, strategy and international development.
- Harsh Singh: Head of Growth.
- Gitika Sharan: Head of Marketing (media contact).
- Aakash Pant: Lead Engineer.
- Romesh Wadhvani and Sunil Wadhvani: Co-Founders; Shalina Wadhvani is also named as a Co-Founder.

17.3 Three core capabilities

Advisory Services: Guiding national AI strategies aligned with development priorities.

Technology Development: Building context-specific, adaptable solutions rather than generic imports.

Capacity Building: Strengthening local institutions and talent for inclusive, sustainable AI adoption.

17.4 Track record cited in the launch

- More than 25 AI platforms and solutions supported in India through the Wadhvani family's USD 25 million commitment, reaching more than 150 million people.
- An AI oral reading fluency tool that had assessed over 6 million children in 11 million assessments in Gujarat and Rajasthan.
- A cascade of AI solutions for TB screening using cough sound data and patient history.
- A clinical decision support system enabling 160,000 health workers to conduct over 250,000 consultations daily.

17.5 Statement of approach

Co-founders Romesh and Sunil Wadhvani said the challenge is ensuring benefits of AI reach communities where they can change lives most profoundly. Shalina Wadhvani said the group is not creating one-time pilots but embedding AI into real systems and infrastructure. Nakul Jain said the real challenge is ensuring models address urgent needs in healthcare, early childhood education and food systems and actually reach people. The Wadhvani Foundation press page also covered the launch.

18. Awards and Recognition

- India AI Impact Summit 2026 (New Delhi, February 2026): MadhuNetrAI, developed with AIIMS New Delhi, won the "AI for ALL: Global Impact Challenge", chosen from more than 4,600 applications from over 60 countries. It was recognized for strengthening early detection of diabetic retinopathy inside India's public health system.
- Google AI Impact Challenge (2019): Wadhvani AI was among the grantees for its cotton pest management solution and was later described as the only Indian winner.
- The Shishu Maapan and Line Probe Assay pages have "Recognized Innovation" sections showing award images, and the Publications page has a "Recognized Innovation" gallery. The specific award names are only shown as images on the website.
- Wadhvani AI is featured in Analytics India Magazine coverage titled "Top 15 AI Startups Powering India's Self-Reliance Mission" (23 February 2026), listed in the home page press section.

19. Publications and Research

19.1 Publication categories

The Publications page filters content by All, Books, Reports and Research Papers.

19.2 Featured reports

Education report (with The Bridgespan Group, supported by Google.org): Identifies seven bold bets to transform learning outcomes for 350 million students through responsible AI in foundational education.

Annual Report 2025: Covers Wadhwani AI's work in 2025 to develop and deploy responsible AI solutions across health, education and agriculture, strengthening public systems and improving outcomes at population scale.

AI in agriculture casebook: A "Casebook on the Real-World Impact of Artificial Intelligence in Agriculture" was developed with the Government of Maharashtra's AI and Agritech Innovation Center, supported by the World Bank and Wadhwani AI, as a blueprint for scalable, ethical AI in food security across the Global South.

19.3 Research focus areas

Responsible AI, Generative AI, Automatic Speech Recognition, Computer Vision, Multimodal AI, NLP, Edge and Low-Resource Solutions, and Risk Stratification (see Section 11).

19.4 Independent literature

Peer-reviewed work mentions Wadhwani AI's cotton pink bollworm system: a multi-state field evaluation used smartphone images of pheromone traps and a deep-learning model to detect and count pink bollworm moths in Karnataka and Maharashtra.

20. News, Events and Blog Highlights

20.1 In the news (as listed on the website home page)

- 16 February 2026, Channel News Asia: "Raising Expectations - Is AI Really The Great Equaliser In Society?"
- 10 February 2026, Times of India (Vijayawada): "AP agriculture department signs MoU with Wadhwani AI to boost crop management".
- 23 February 2026, Analytics India Magazine: "Top 15 AI Startups Powering India's Self-Reliance Mission".
- 24 February 2026, BBC News (Marathi): coverage of the India AI Impact Summit.
- 17 March 2026, Navbharat: AI to be used to monitor the Mahatma Phule scheme.

20.2 Other notable coverage

- 28 January 2026: Google.org Rs 85 crore grant coverage (PTI, Business Standard, Business Today, YourStory).
- 18 to 23 February 2026: MadhuNetrAI award coverage.
- 15 to 16 March 2026: Uttar Pradesh partnership coverage (BioSpectrum, Digital Health News).
- 25 to 29 May 2026: Rajasthan agriculture MoU coverage (Rural Voice, CXOToday, Economic Times).
- 6 July 2026: report that India is ready to scale AI across public education (CIOL).
- 18 to 19 September 2025: Wadhwani AI Global launch (Business Wire and syndicated outlets).

20.3 Blog posts featured on the home page

- "How AI is helping health workers bridge the follow-up gap in India's fight against TB"
- "Simplifying Newborn Anthropometry - One Smartphone Video at a Time"
- "Vaachan Samiksha: Leveraging AI to Bridge the Literacy Divide"
- "Empowering Millions of Indian Farmers with Instant AI Chatbot Support"
- "Community Health Officers Lead the Charge for Statewide AI-based TB Screening"
- "Beyond the Blind Spots: Using AI to Prevent Blindness in Diabetics"

20.4 Events

The India AI Impact Summit 2026 (held in February 2026 at Bharat Mandapam, New Delhi) had a dedicated Wadhwani AI banner and microsite page. Wadhwani AI's Chief Scientist AI/ML was listed as a speaker for the Uttar Pradesh AI and Health Innovation Conference 2026. Wadhwani AI also runs "AI Readiness" workshops for partner organizations.

21. Careers and Culture

21.1 Why join

The Careers page says Wadhvani AI is for people passionate about using technology to solve the world's most pressing challenges, creating and deploying AI that delivers real social impact at scale. It describes a work environment that people look forward to and has a culture video titled "WIAI-Culture". The four values are Serve, Care, Learn and Communicate (Section 4.3).

21.2 How to apply

Applications go through the Careers page, which links each open position to a Zoho Recruit posting (wadhvaniai.zohorecruit.in). Job application emails go to careers@wadhvaniai.org.

21.3 Open positions listed on the Careers page (page updated 29 July 2026; verify current status)

Programs: Data Consultant (remote); Consultant Dermatologist (New Delhi); Local Program Officer (Vijayawada); Program Associate (Delhi); Consultant Data Coordinator (remote).

Communications and Capacity Building: Senior Associate, Capacity Building (remote); Communications Consultant (India).

Deployment: District Consultant (Barpeta); State Lead, Deployment (Dehradun); Consultant Senior Program Officer, Education (New Delhi); Language Expert, Odia (New Delhi); Language Expert, Punjabi (New Delhi).

Engineering: QA Engineer (remote).

Machine Learning: Machine Learning Intern (remote); Associate ML Scientist (remote); ML Scientist, ASR (Noida); ML Scientist, LLM (Noida); ML Scientist, Speech Processing (remote); Associate ML Scientist I and II (remote).

Measurement and Evaluation: MERLI Specialist, Agriculture (New Delhi); Impact Analytics Fellow (New Delhi); MERLI Fellow (New Delhi).

Partnerships: Fundraising Manager (New Delhi).

21.4 Types of roles the organization hires for

Machine learning (speech, LLM, vision), software and QA engineering, cloud and security, product management and analysis, program and deployment management (with state and district field roles), MEL and impact analytics, UX research and design, capacity building and instructional design, language experts for Indic languages, clinical experts such as dermatologists and public-health physicians, pedagogists, communications, finance, grants and HR.

22. Solutions Quick Index

Each line gives: solution - domain - purpose - key metric with its date.

- Shishu Maapan - Healthcare (newborn) - smartphone video anthropometry for newborns - 11,000+ people impacted (July 2025).
- PROS - Healthcare (maternal) - predicts missed antenatal care visits - pilot; 650+ workers trained.
- Cough Against TB - Healthcare (TB) - cough-sound TB screening app - 289,777 screened in the impact panel.
- PATO - Healthcare (TB) - predicts adverse TB outcomes - 3,546,440 patients enrolled in the panel.
- Line Probe Assay Automation - Healthcare (DR-TB) - AI reading of LPA strips - 97 CDST labs.
- Vulnerability Mapping - Healthcare (TB) - maps TB-vulnerable geographies - 138 districts; 35,000+ villages.
- Chest X-Ray AI - Healthcare (TB) - automated X-ray screening - 114,000+ X-rays in MP.
- CDSS - Healthcare (telemedicine) - clinical decision support on eSanjeevani - 234 million+ teleconsultations.
- Diabetic Retinopathy Detection / MadhuNetrAI - Healthcare (eye) - retinal image screening - 10,000+ patients (February 2026).
- HealthVaani - Healthcare (frontline worker assistant) - conversational AI in Hindi, English and Hinglish - 6-state pilot.
- Media Disease Surveillance - Healthcare (surveillance) - outbreak alerts from media - 437 confirmed outbreaks since 2022.
- Oral Reading Fluency - Education - speech-based reading fluency assessment - 34 million assessments (solution page).
- SEAP - Education - spoken English assessment and practice - planned 500,000 learners.
- LEARN - Education - AI personalization for SWAYAM - part of the Ministry of Education collaboration.
- Agri AI Collect - Agriculture - voice-first farm data capture - part of 36,000+ farmers onboarded in 6 states.
- Krishi 24/7 - Agriculture - agricultural news monitoring dashboard - launched 6 November 2023.
- Soybean Grain Analyzer - Agriculture - smartphone soybean quality grading - deployed under Rajasthan MoU plan.
- Crop Ace - Agriculture - pest and disease diagnosis from photos - cotton, maize, chilli and rice.
- NPSS - Agriculture - national pest surveillance with AI identification - AI module covers 61 crops (2026 review).
- Kisan e-Mitra - Agriculture - PM-KISAN chatbot - 3 million+ grievances resolved.
- Krishi Saathi - Agriculture - Kisan Call Centre advisor chatbot - 279 thousand+ queries resolved.

23. Glossary

ASHA: Accredited Social Health Activist, a community health worker in India.

ANM: Auxiliary Nurse Midwife, a frontline health worker for maternal and child health.

ANC: Antenatal care, the check-ups given to pregnant women.

HBNC: Home-Based Newborn Care visits.

ANMOL: A public health platform (ANM Online) with which Shishu Maapan integrates.

Anganwadi: A government child-care and early-childhood center; Anganwadi workers deliver ECCE and nutrition services.

ASR: Automatic Speech Recognition.

CDST: Culture and Drug Susceptibility Testing; the laboratory network that uses LPA for DR-TB.

CDSS: Clinical Decision Support System.

DR: Diabetic retinopathy (or drug-resistant, in the context of DR-TB).

DR-TB: Drug-resistant tuberculosis.

ECCE: Early Childhood Care and Education.

eSanjeevani: India's national telemedicine platform.

FLN: Foundational literacy and numeracy.

ICAR-NCIPM: Indian Council of Agricultural Research - National Centre for Integrated Pest Management.

IDSP: Integrated Disease Surveillance Programme.

KCC: Kisan Call Centre.

LEHS: Lords Education and Health Society, the society that houses the Wadhwani AI unit.

LPA: Line Probe Assay, a molecular test used to detect drug-resistant TB.

MDS: Media Disease Surveillance.

MEL: Measurement (or Monitoring), Evaluation and Learning; the internal team title. The MERLI specialist titles are used in the same team (expansion not stated on the website).

NHM: National Health Mission.

Ni-kshay: India's TB patient notification and management platform.

NPSS: National Pest Surveillance System.

ORF: Oral Reading Fluency.

PATO: Prediction of Adverse TB Outcomes.

PM-KISAN: Pradhan Mantri Kisan Samman Nidhi, a central income-support scheme for farming families (Rs 6,000 per year).

POSHAN Tracker: Government platform used by Anganwadi services for nutrition monitoring.

PROS: Pregnancy Risk and Outcome Stratification.

SEAP: Spoken English Assessment and Practice.

SWAYAM: India's national online learning platform.

Bhashini: India's national language translation mission platform.

24. Frequently Asked Questions

What is Wadhvani AI?: An independent not-for-profit institute founded in 2018 by Romesh and Sunil Wadhvani that builds and deploys AI solutions in health, education and agriculture, mainly inside India's public systems.

Who founded Wadhvani AI?: Dr. Romesh Wadhvani and Sunil Wadhvani.

Who leads Wadhvani AI?: Shekar Sivasubramanian is Head, Wadhvani AI; Dr. Alpan Raval is Chief Scientist, AI/ML. Sameer Garde was CEO from 2021 and is still listed as CEO on Wikipedia.

Where is Wadhvani AI based?: LinkedIn and Wikipedia list Mumbai; the website contact page lists the LEHS office in Lajpat Nagar, New Delhi. Team members work across many Indian states.

Is Wadhvani AI a company or a nonprofit?: A nonprofit. It is a program of the AI Unit of Lords Education and Health Society (LEHS).

What is the difference between Wadhvani AI and Wadhvani AI Global?: Wadhvani AI (India) works on Indian public systems. Wadhvani AI Global, launched in September 2025 and led by CEO Nakul Jain, applies AI advisory, technology development and capacity building in Africa, Latin America and other low and middle-income countries.

What sectors does it work in?: Healthcare, education and agriculture.

What are its best-known solutions?: Cough Against TB, PATO, Line Probe Assay Automation, CDSS, MadhuNetrAI (diabetic retinopathy), Media Disease Surveillance, Shishu Maapan, Oral Reading Fluency, Kisan e-Mitra, Krishi Saathi and NPSS.

How many people has it reached?: 190 million+ individuals through its solutions (January 2026).

How does it use responsible AI?: A Responsible AI playbook, a "human-in-command" philosophy and a Responsible Data Use Policy.

Who funds it?: The Wadhvani family, Google.org (USD 2 million in 2019 and Rs 85 crore in 2026), USAID (USD 2 million in 2020) and other partners.

What are its core values?: Serve, Care, Learn, Communicate.

How can I contact it?: contact@wadhvaniai.org for general inquiries; partnerships@wadhvaniai.org for partnerships; careers@wadhvaniai.org for jobs; communications@wadhvaniai.org for media.

Which languages do its tools support?: Hindi, English and Hinglish (HealthVaani); 11 Indic languages (Kisan e-Mitra, Krishi Saathi); 12 Indic languages plus English (MDS); 10 Indian languages planned for ORF at national scale.

Which state governments has it signed agreements with in 2026?: Uttar Pradesh (health, March), Andhra Pradesh (agriculture, February) and Rajasthan (agriculture, May).

Which award did it win in 2026?: MadhuNetrAI won the "AI for ALL: Global Impact Challenge" at the India AI Impact Summit 2026.

What is the Google.org grant?: A Rs 85 crore (about USD 10 million) grant announced on 28 January 2026 to build India's first comprehensive AI-for-Education blueprint reaching 75 million students, 1.8 million educators and 1 million early career professionals by December 2027.

25. Key People Index

- Dr. Romesh Wadhwani - Founder.
- Sunil Wadhwani - Founder.
- Shalina Wadhwani - Co-Founder, Wadhwani AI Global.
- Shekar Sivasubramanian - Head, Wadhwani AI.
- Dr. Alpan Raval - Chief Scientist, AI/ML.
- Abhishek Kumar - Vice President, Product and Engineering.
- JP Tripathi - Director, Agriculture Programs.
- Milton Nayak - Chief Functionary and CFO.
- Neeraj Agrawal - Chief Program Officer.
- Neha Vats - Associate Director, HR.
- Prachi Karkhanis - Associate Director, MEL.
- Rituparna Sengupta - Director, Communications and Outreach.
- Arti Ahuja - Senior Advisor.
- Nakul Jain - CEO and Managing Director, Wadhwani AI Global.
- Harsh Singh - Head of Growth, Wadhwani AI Global.
- Gitika Sharan - Head of Marketing, Wadhwani AI Global.
- Aakash Pant - Lead Engineer, Wadhwani AI Global.
- Sameer Garde - CEO from August 2021 (former).
- P. Anandan - earlier CEO (former).

26. Data Discrepancies and Verification Notes

Because this handbook may be used to answer factual questions, the following conflicts between sources are recorded so that answers can state the context.

26.1 Reach figures

The 2025 timeline says "20 million lives impacted" while the website headline says "190 million+ individuals reached" (January 2026), and the Wadhwani AI Global release (September 2025) says 150 million+ people. The timeline value is probably a count of people directly impacted or a milestone from 2025, while the headline is a broader reach figure; the website does not explain the difference.

26.2 Oral Reading Fluency

15 million+ assessments (January 2026, home and education page) versus 34 million assessments (ORF solution page, undated but the page was last modified in August 2026). Earlier releases: 11 million assessments to over 6 million children (September 2025) and nearly 7 million students (January 2026). The most recent number is the solution-page figure.

26.3 Cough Against TB

Header: 122,000+ screened (July 2025). Panel: 289,777 screened and 17 states. Home page: 16 states and 122,476+ screened. Treat 289,777 as the more recent count.

26.4 PATO

Header: 267,000+ enrolled (July 2025). Text: 147,000+ enrolled in 15 states and UTs. Panel: 3,546,440 enrolled across 36 states and UTs. The panel reflects national integration through Ni-kshay and is the latest.

26.5 Diabetic retinopathy

The healthcare page blurb (20 AIIMS centers, 3,000+ patients) is older than the solution page (13,862 screened, 47 facilities, 13 states) and the February 2026 MadhuNetrAI announcement (about 20,000 images, 10,000+ patients, 40 facilities, 21 districts, 11 states). The metrics differ because they measure different dates and units (patients versus images versus facilities).

26.6 CDSS

350,000 daily consultations (healthcare page) versus 250,000+ daily consultations by 160,000 health workers (September 2025 release).

26.7 Funding

USD 30 million founding effort (Wikipedia) versus USD 25 million commitment (Wadhwani AI Global release); third-party funding totals from CB Insights and LeadIQ disagree and are unverified.

26.8 Address and headcount

Mumbai (LinkedIn, Wikipedia) versus New Delhi (website contact page, LeadIQ). Employee counts range from 87 (Tracxn, July 2024) to about 314 (LeadIQ, July 2026).

26.9 Leadership titles

The website says "Head, Wadhvani AI" for Shekar Sivasubramanian; some LinkedIn posts call him CEO; Wikipedia's infobox still lists Sameer Garde as CEO.

26.10 Wadhvani AI versus Wadhvani Foundation

News about the Andhra Pradesh and January 2024 agriculture MoUs names the Wadhvani Foundation, while the Rajasthan, Uttar Pradesh and education announcements name Wadhvani AI (LEHS AI Unit).

26.11 Website copy errors

The MDS page text contains a sentence copied from PROS about ANC visits, and the Krishi Saathi page refers to "GPT-40-mini" which appears to be a typo for GPT-4o-mini. These do not describe the actual function of the solutions.
